Large 19" Interactive Touch Panel Monitor with imaging software, annotation pen, and stand included. Interface with your PC via USB for annotation, drawing, or mouse control. Great for the classroom or conference room!

Part # MSP19A

Wireless Microphone System

- IR or 2.4GHz system operation
- Small "Pendant" Style Mics with Transmitter
- 1 or 2 -Channel Receivers
- Total Immunity with IR Carrier Frequencies

Make sure your message is heard! The Voice Augmentation Systems from Dukane are designed for mid-size meeting applications in classrooms, government conference rooms, corporate boardrooms, courtrooms, or convention centers. A simple but secure method to amplify your voice; one system includes 2 wireless mic's and a 2 channel IR receiver so that 2 speakers can present simultaneously without interference. Systems can be integrated with the MPS audio for crisp clean sound.

Optional Wheel Upgrade

media

ATV

MPS Part # + ATV

- Two 10" solid rubber wheels
- A third 5" wheel for center mounting
- One 1" solid steel axle
- Steel base plates
- Wide wheel base to prevent tipping and lean
- Easily navigate curbs and sidewalks
- Excellent ground contact and stable turning

This wheel upgrade kit fits on all MPS full size workstations. The kit installs 2, 10" solid rubber wheels on the left and right sides of the MPS. The 10" wheels are supported by a solid axle that is attached to the base of the cart with a sub assembly using the existing wheel mounting holes. The swivel wheels are recycled on a new mounting plate and are augmented with a third swivel wheel (included in the kit) mounted in the center. The three swivel wheels use the existing wheel mounting holes to secure the new mounting plate.

The wheel kit uses larger heavy-duty wheels to navigate curbs and sidewalks. The triple swivel wheels allow excellent ground contact and provides stable turning. The 10" wheels also widen the wheel base to prevent tipping and lean.

This kit uses existing wheel holes and hardware to apply the new bottom supports. The existing cart must be tipped on its side or back to install this upgrade. A 7/16 inch socket and ratchet is required to remove and tighten existing and provided hardware.
